## Absorbs:

- ✓ Oil Spills
- ✓ Paints
- ✓ Petrol
- ✓ Chemicals
- ✓ Battery Acids
- ✓ Body Fluids

## TRANSPORT SPILL RESPONSE KIT

The Cyndan Spill Response Kit Transport is a convenient kit prepared especially for the transport industry.

The Spill Response Kit is a spill kit for the absorption of toxic and hazardous liquid spills on hard surfaces including workshop floors and roadways.

### Enviro Drysorb

Cyndan Enviro Drysorb is designed for the absorption of liquid spills on hard surfaces including workshop floors and roadways.

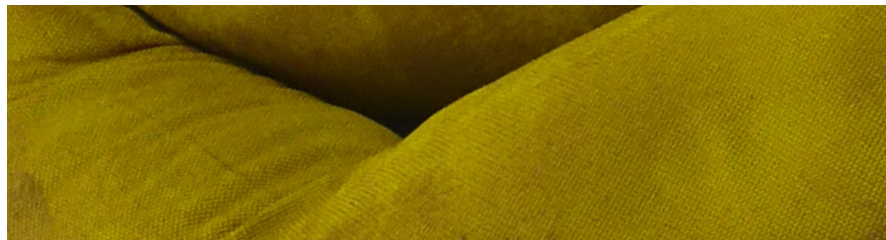

Enviro Drysorb is made from a natural renewable source. It is non-toxic and is safe to animals, humans and the environment. It is made from a recycled, cellulose based waste material, which has been treated to reduce dusting, making it simple, easy and pleasant to use.

Enviro Drysorb will absorb many times its own weight and is beneficial for use on all spills such as oil, paint, petrol, chemicals, vomit, blood, urine and other pollutants. It encapsulates the pollutant thus easing the pressure on water quality in our environment.

As it does not allow absorbed liquids to leach out, it meets EPA Guidelines for disposal directly to landfill ensuring the simplest and most effective clean up solution. The water resistant formulation also allows it to absorb oil from water, whilst floating on the surface.

### KIT CONTENTS:

- 15 kg Cyndan Enviro Drysorb
- 2 X 1mtr Cyndan Enviro Drysorb socks
- 1 disposable waste bag
- Kit is contained in a sturdy, waterproof carry bag
