Downer EDI Works – Protecting Roads & the environment after vehicle accidents in VIC

ISSUE

Downer EDI Works have the contract to attend and repair the Major Arterial roadways for VIC Roads after vehicle accidents and spills. Downer needed a solution that could absorb fuels & oils fast and protect the environment from these products making their ways into drains and water tables.

ACTION

After researching the market place, Downer chose **Cyndan Enviro Drysorb**. The product absorbs 10-15 times its own weight and once absorbed, fuels and oils cannot leach out of Enviro Drysorb which has EPA approval to them be disposed of at landfill. That makes for a faster clean up and better result than using sand or kitty litter which don't have the same absorption properties or EPA approvals as Enviro Drysorb.

ENVIRO
DRYSORB
Downer EDI
Works

Many organisations including Roads & Maritime NSW who also use it on some of their major roadways in NSW are increasingly using **Enviro Drysorb**. It is popular in warehouses and industrial factories where it forms part of the Spill Kits sold by Cyndan. For more information contact your nearest Cyndan Sales Representative.
