To Whom it may concern,

I write in praise of the Cyndan Cyndazymes & Liquidzymes treatment for odours and bacteria which we are using in the waste tanks on our Houseboats and Party Pontoons. After nearly 10 years of dealing with many other supposedly effective products for the odour problems associated with boat holding tanks, and still having issues with offensive odour, we tried the Cyndan products. What a difference it has made to reducing the odour in and around the toilet area on all of our boats.

Initially we dosed our Party Pontoon and Houseboat tanks after pumping out with the Cyndazymes mixed with fresh water, and let it stand until next hire. With the Party Pontoons we added the 200ml of the Liquidzymes to the 12 litre flush tank as well, this meant that a small dose was added to the holding tank with each use. After pumping out the holding tank following each hire, we flush a little into the holding tank where it sits until the next use. Liquidzymes are added again to the holding tank every third top up.

With the houseboats which draw their flush water from the sea, initially we dosed the holding tank with Cyndazymes mixed with water and let it stand until after the next hire then pumped out as usual. Now we simply mix one 250ml cup of liquidzymes with a bucket of fresh water and pour it down the toilet into the holding tank after we have pumped out the waste and let it stand until the next use.

Every now and then we spray around the base of the toilet and walls of the cubicle with Liquidzymes to reduce odour as well. This seems to be very effective.

Regards

Jane Walding
