

Revive Timber Cleaner

Remove tree sap, sludge, clean timber-handling equipment

Cleans timber prior to coating or sealing, particularly weathered, tannin-stained, mouldy or mildew-affected timber decking. Effective in removal of tree sap and other gums from saw blades and related timber-processing equipment.

Directions for use:

Dilution:

Timber and decking: 1 part to 10 parts water, or up to 70 parts water depending on the condition of the timber. Saw blades and related equipment: 1 part to 10 parts water.

Timber and decking:

1. Remove any loose contamination using a broom or washing down with water.
2. Wet the timber surfaces to be cleaned.
3. Apply generously, scrubbing with a stiff-bristle brush or broom. Clean whole sections at a time. Avoid spot cleaning.
4. Allow to dwell for 5 to 10 minutes, but do not allow to dry.
5. Thoroughly rinse the surface with water, preferably use a pressure washer.
6. Repeat steps 2 to 5 if required.

Note: When treating timber, we recommend that you test a small out-of-sight section first. Avoid contact with aluminium and take care around painted surfaces. Best to apply to cool surfaces, out of direct sunlight, to avoid cleaner drying on the timber.
