Vitroglaze – Application on Solar Panels

VITROGLAZE Application on Solar Panels

ISSUE

Solar panel glass cleanliness affects dramatically its performance.

VITROGLAZE

VITROGLAZE Application on Solar Panels

SOLUTION

Cyndan Vitroglaze is a permanent coating that prevents the adhesion and buildup of contaminants onto the glass surface.

With **Vitroglaze**, the glass on the solar panels maintains its clarity and airborne pollutants do not adhere to the surface as readily, being easy to clean off when it rains or in windy conditions.

VITROGLAZE Application on Solar Panels

RESULTS

SolCool.net was using Vitroglaze as a Pre and Post maintenance solution for Solar Panels in the State of Nevada, USA.

Vitroglaze improved the performance of the solar panel systems by **10-18%**.

Henderson, Nevada 89014

Dear Sirs,

We would like to commend you on your surface treatment product that we have been using as a Pre and Post maintenance solution for our customers. The application of your surface treatment product has improved the performance of the solar panel systems by 10-18%!

We attribute this to the fact that the glass on the solar panels maintains its clarity and that airborne pollutants do not adhere to the surface as readily and are easy to clean off, when it rains or in windy conditions.

We are very pleased with the performance and ease of application of the treatment.

We are happy to continue to use Vitroglaze on all of our solar panels and will recommend your product to our previous customers for on site applications to their existing solar panels.

Sincerely,

Clifford Sutton
VP of Sales and Marketing
